Due to the history class being moved from the server to the client several end points are no longer relevant. The following endpoints are relevant:

PUT: /score/:website
    Description: Takes a url (example.com) and returns a json containing the score of the website

PUT: /scores
    Body: Json containing websites to score (see sampleHistory.json for an example of what the json should look like)
    Description: Takes a history and returns the scores of each website in the history, the browsing score of the history, and the risks taken in the history

GET:/mostVisitedGoodWebsite
    Description: Returns the score of the most visited website with a good score (>=60)

GET:/mostVisitedBadWebsite
    Description: Returns the score of the most visited website with a bad score (< 60)

GET:/convertRisks
    Query parameter example: /?risks=501,302,401,
    Description: Takes a string containing several numbers separated by commas and returns a list containing the type of risk each number is associated with.
